

Let's Discuss

Grow your business

Staying ahead when it comes to the right IT solution isn't always easy. Commit to the wrong system and it could prove costly, while investing in out-of-date technology could put your business at a competitive disadvantage.

We want to work with you

Push IT has the expertise and technological know-how to provide IT solutions that deliver real benefits to business. Whether it's a new and more efficient phone or email system, or the development of a complex, state-of-the-art technological infrastructure across multiple locations, we have the capability to handle every size of project. We're the helping hand you've been looking for.

It all starts with a consultation

There isn't a one-size-fits-all approach when it comes to IT planning. What is right for one business might not be the most appropriate solution for another. Instead, we'll take the time to get to know you and understand your needs. Using a consultative approach, your objectives will be reviewed to assess what is working and what isn't, followed by the professional implementation of your project from start to finish.

- / Efficient information sharing and external collaboration
- / Robust cloud solutions
- / Migrations and system upgrades

Stress-free and seamless

You don't need to worry about expensive downtime and delays when it comes to rolling out your latest project. All eventualities are planned so you won't have to watch out for nasty surprises. Upgrades and changes will be carried out smoothly, so that you can get on with running your business.

- / Disaster recovery
- / IT auditing
- / Business printing solutions

Unlocking potential through clever tech

IT systems shouldn't be a hindrance to business development. Technology should complement and facilitate future growth. Consultation processes are designed to identify where changes need to be made to support your business now and for years to come.

- / Trusted Microsoft partner
- / Security health checks
- / Data backups and recovery

Bespoke projects

Sometimes you don't always need a fully managed solution, and simply want some extra support to help with your existing IT provision. Alternatively, you might be looking for a complete overhaul of your current operations. Each IT strategy is tailor-made and bespoke to your business objectives, while our flexible service plans mean you can add to a project over time if you need to.

Affordable pricing

We don't believe in hidden charges and mounting costs with no explanation. Instead, we work in partnership with all clients to deliver projects on time and within an agreed budget, keeping you informed at every step of the way. Pricing is fair, transparent and affordable.

IT with a personal touch

A hands-on approach is taken to IT planning with on-site visits to get a thorough understanding of what's needed and provide close contact throughout a project to troubleshoot any issues and offer support.

- / Anti-virus and security solutions
- / Remote and onsite support options
- / Server management with proactive maintenance

Effective planning and IT strategy

Businesses trust Push IT to plan and deliver IT projects that unlock potential, improve productivity and save money.
